Jonathan S. Adelstein, Commissioner
Federal Communications Commission
445 12th Street SW
Washington, DC 20554

Dear Ms. Adelstein:

I am writing with the proposition of creating a **groundbreaking communications** and security network that has the capabilities of significantly improving a vast **array** of government **services** while generating a revenue source on a county by county basis.

The benefits include:

1. **A government owned** and operated communications system capable of handling all levels of communications (internet, phone, mobile phones and computers) on a county by county basis.
2. The creation or expansion of an Intelligent Traffic System (ITS) and wireless network for their ability to aid emergency services (police, fire & ambulance) in their dire situation travels resulting in quicker and safer response times. Vehicles and their **on** board monitors can predetermine the route and manage each traffic light in advance automatically based on the vehicles actual location to prevent these personnel from ever having to muscle their way through intersections again. Adding a blinking green light signal can even pave the way clear in advance. Generally speaking, response times are 90% of the battle and **there** is a lot more to this **ITS** system's capabilities.
3. Integrated bus routes with timers and destinations electronically posted at bus stops resulting in less gas/maintenance as well as a more dependable user-friendly public transportation system.
4. Potential for sex offender tracking around school districts **as** well as child tracking in the event of abduction.
5. Having the ability to reach at least 15-miles offshore allowing data transfer communications to occur with ocean vessels to improve port security.
6. Creating a private revenue stream from this government **owned** wireless infrastructure used in conjunction with a private-entity hub of which I'm proposing. The private entity product will be a book-sized device capable of providing phone and internet connectivity without **a** connection other than for power and computer connection.

Melbourne FL, 32940

P: 321-751-3608 / F: 321-751-3609

Email: msoliman@crossingsgrup.com

I eagerly await your **response** to this matter **and** have already drafted a business model **and** phase-in concepts to allow for self-growth of this network once seeds **are** planted. Please contact me to discuss further and possibly meet to **go** over the significance of this concept and **my** feasible application plan **to** justify taking the educational system frequencies off of the **open** market.

Very Truly Yours,

Mark Soliman
